## EDUCATION

**McMaster University** Sept 2024 – Apr 2027  
*Honours Bachelor of Science in Mathematics & Statistics, Minor in Finance* Hamilton, ON  
**Relevant Coursework:** Probability and Stochastics (Masters), Applications of Machine Learning, Data Structures & Algorithms, Software System Design, Probability, Statistics, Calculus

## PROFESSIONAL EXPERIENCE

**Artificial Intelligence Developer** May 2026 – Aug 2026  
*IG Wealth Management* Toronto, ON

- Built a **GCP-hosted agentic ML framework** using **Pub/Sub**, **Dataflow**, **BigQuery**, and **Gemini Enterprise Agents** to automate standardized mortgage application review, reducing review time by **90%** and saving **400–500 analyst hours monthly**.
- Engineered production **model-serving guardrails** using **Vertex AI Vector Search** semantic caching, **Cloud DLP** PII masking, and **Vertex AI Pipelines** for evaluation, monitoring, and hallucination tracking, reducing redundant LLM calls and API costs by **60%**.

**Machine Learning Engineer** Apr 2026 – May 2026  
*Greypoint Industries (YC S26)*

- Led the technical design behind a **\$200K DND IDEaS** counter-drone (counter-UAS) contract bid, architecting a **multimodal machine learning** framework for **real-time sensor fusion** that unified disparate **temporal data streams** to resolve tracking vulnerabilities in single-sensor failure environments.

**Software Engineer** Sept 2025 – Dec 2025  
*Arkimetrix Analytics*

- Reduced manual processing by **70%+** across **10K+ records** by building document parsing pipelines via **Azure Form Recognizer**, **Google Gemini API**, and **Docker** with **containerized CI/CD** and schema enforcement.
- Cut end-to-end reporting latency by **90%** (minutes → **sub-30 seconds**) by optimizing **Flask/PostgreSQL** APIs and **ETL pipelines** via **CRON jobs** for month-end batch processing.

**Machine Learning Researcher** May 2025 – Aug 2025  
*McMaster University*

- Accelerated sequence pattern-matching by **4x** across **100GB+** genomic datasets by co-developing **overlapping-position algorithms** that eliminated sequential bottlenecks in the **MAXCOVER** protein-sequence pipeline.
- Built **automated testing** and reproducible data pipelines with **GitHub Actions**, **PyTorch**, and **MLflow**, benchmarking throughput and latency across experimental workflows to ensure consistent model validation.

## CLUBS & PROGRAMS

**Research Member — Safety & Alignment** Mar 2026 – Present  
*Cohere Labs Open Science Community*

- Engineered **MAP**, a **black-box LLM attribution** framework classifying **13 frontier model families** and quantifying **prompt injection** risk; presented at the **Canadian Statistical Student Conference** (2026).
- Built **PyTorch** red-teaming and evaluation pipelines for **guardrail validation**, benchmarking **reward-model vulnerabilities**, **cross-cultural prompt injections**, and toxic-generation risk across **low-resource languages**.

**AI Research Project Member** Jun 2026 – Present  
*McMaster Artificial Intelligence Society (MacAI) — CUCAI 2027*

- Building a **multimodal deep learning** system for **chest X-ray** abnormality classification with **Grad-CAM** explainability and a **vision-language** pipeline generating radiology-style reports; advancing to **CUCAI 2027**.

## TECHNICAL SKILLS

**Languages:** Python, C/C++, SQL, R, Bash, JavaScript/TypeScript, HTML, CSS  
**ML & LLMs:** NLP, RAG, LoRA, PyTorch, TensorFlow, JAX, XGBoost, Pandas, NumPy, Hugging Face  
**SWE:** React, Next.js, Node.js, Flask, FastAPI, REST APIs, Git, GitHub Actions, GitLab, CI/CD  
**Infrastructure & Cloud:** Docker, Kubernetes, Terraform, AWS, Azure, GCP, PostgreSQL, MongoDB, Redis
