EDUCATION

McMaster University

Sept 2022 – Dec 2027

Honours Bachelor of Science in Mathematics & Statistics, Minor in Finance

Hamilton, ON

Relevant Coursework: Probability & Stochastics (Graduate), Deep Learning (Graduate), Machine Learning, Statistics

PROFESSIONAL EXPERIENCE

Carnegie Mellon University

Aug 2026 – Present

Research Contributor

- Conducted **LLM privacy** research under Prof. Hana Habib, translating research hypotheses into **reproducible PyTorch pipelines** and implemented **DP-SGD fine-tuning** for **1–8B parameter models** with **LoRA** and **Opacus**.
- Designed and ran **controlled experiments** across **6 datasets** and multiple privacy budgets, evaluating DP vs. non-DP models on **training-data extraction** and accuracy with **confidence intervals**.

IG Wealth Management

May 2026 – Aug 2026

Artificial Intelligence Engineer Intern

- Built a **mortgage risk-scoring system** from POC to production: deterministic weighted model with external API signals, deployed as a **React/Python** service on **GCP** (**Pub/Sub**, **Dataflow**, **BigQuery**, **Gemini Enterprise Agents**), cutting review time **90%** and saving **400–500 underwriter hours/month**.
- Developed a **TypeScript MCP connector** exposing **RocketReach** tools to **Claude**, enabling AI agents to qualify **540+ contacts per mandate** and automate an **8-hour manual process**.

Greypoint Industries (YC S26)

Apr 2026 – May 2026

Machine Learning Engineer (Contract)

- Built the **ML tracking system** for a **\$200K Canadian defence proposal**, helping drones maintain reliable target tracking when sensors were **jammed, spoofed, or unavailable**; combined multiple sensor inputs using Kalman filtering and adaptive weighting, reducing tracking error **45%**.
- Built a **Python simulation and testing framework** that recreated jamming, spoofing, and sensor failures to measure system reliability before deployment, rejecting **99% of spoofed measurements** and automatically flagging accuracy and latency regressions.

Cohere Labs Open Science Community

Mar 2026 – Present

Research Member - Evaluation

- Engineered **MAP**, a **black-box LLM attribution** framework classifying **13 frontier model families** at **82% accuracy** using **statistical anomaly detection** and **feature engineering** on model behavior; presented at the **Canadian Statistical Student Conference** (2026).
- Built a **multi-provider LLM evaluation pipeline** in **PyTorch** with **SQLite** provenance tracking, **225-feature extraction**, and **GitHub Actions** CI regression tests benchmarking **prompt injection** and **reward model** vulnerabilities.

Arkimetrix Analytics

Sept 2025 – Dec 2025

Data Engineering Intern

- Architected a containerized document parsing engine via **Azure Form Recognizer** and **Google Gemini API**, extracting **10K+ unstructured records** and reducing manual processing by **70%+**.
- Orchestrated **terabyte-scale** backend infrastructure with **Apache Airflow**, **PostgreSQL**, and **Flask**, optimizing database schemas to drive faster end-to-end month-end reporting cycles.

PROJECTS & CLUBS

Google Developer Groups McMaster - Open Source Developer

- Developing **Sentinel**, an open-source **multi-agent LLM security** platform using **LangGraph**, **MCP**, and **RAG** to detect **software supply-chain**, dependency, and **CI/CD** vulnerabilities in GitHub pull requests.
- Building an **LLM evaluation** benchmark of adversarial pull requests (malicious install scripts, unpinned **GitHub Actions**, secret exposure) to measure agent **precision**, **recall**, and **false-positive rate**.

DeGroote Finance & Investment Council - Quantitative Strategies

- Developed and backtested **algorithmic trading strategies** in **Python & C#** for a **~\$180K long-only equities fund**; built a **multi-asset momentum strategy** (**RSI**, **EMA**, **MACD**), ranking **top 10** in QuantConnect's open-source competition.
- Built a **statistical arbitrage pairs-trading strategy** using **cointegration** and **ADF tests** to identify stationary spreads for **mean reversion**; analyzed **risk-adjusted performance** using **Sharpe ratio**, **max drawdown**, **alpha**, and **beta**.

TECHNICAL SKILLS

Languages: Python, C/C++, SQL, R, Bash, JavaScript/TypeScript, HTML, CSS

SWE: React, Next.js, Node.js, Flask, FastAPI, REST APIs, Git, GitHub Actions, GitLab, CI/CD

Infrastructure & Cloud: Docker, Kubernetes, Terraform, AWS, Azure, GCP, PostgreSQL, MongoDB, Redis, Databricks
